

# Agriculture and Food and Nutrition Security: Climate Risk and challenges

**Making Useful Climate information Available for ALL**

Peter Johnston

Climate System Analysis Group

University of Cape Town

**Climate-related disasters (including droughts, floods and storms) are among the main drivers of food insecurity.**

# Climate Variability Considerations

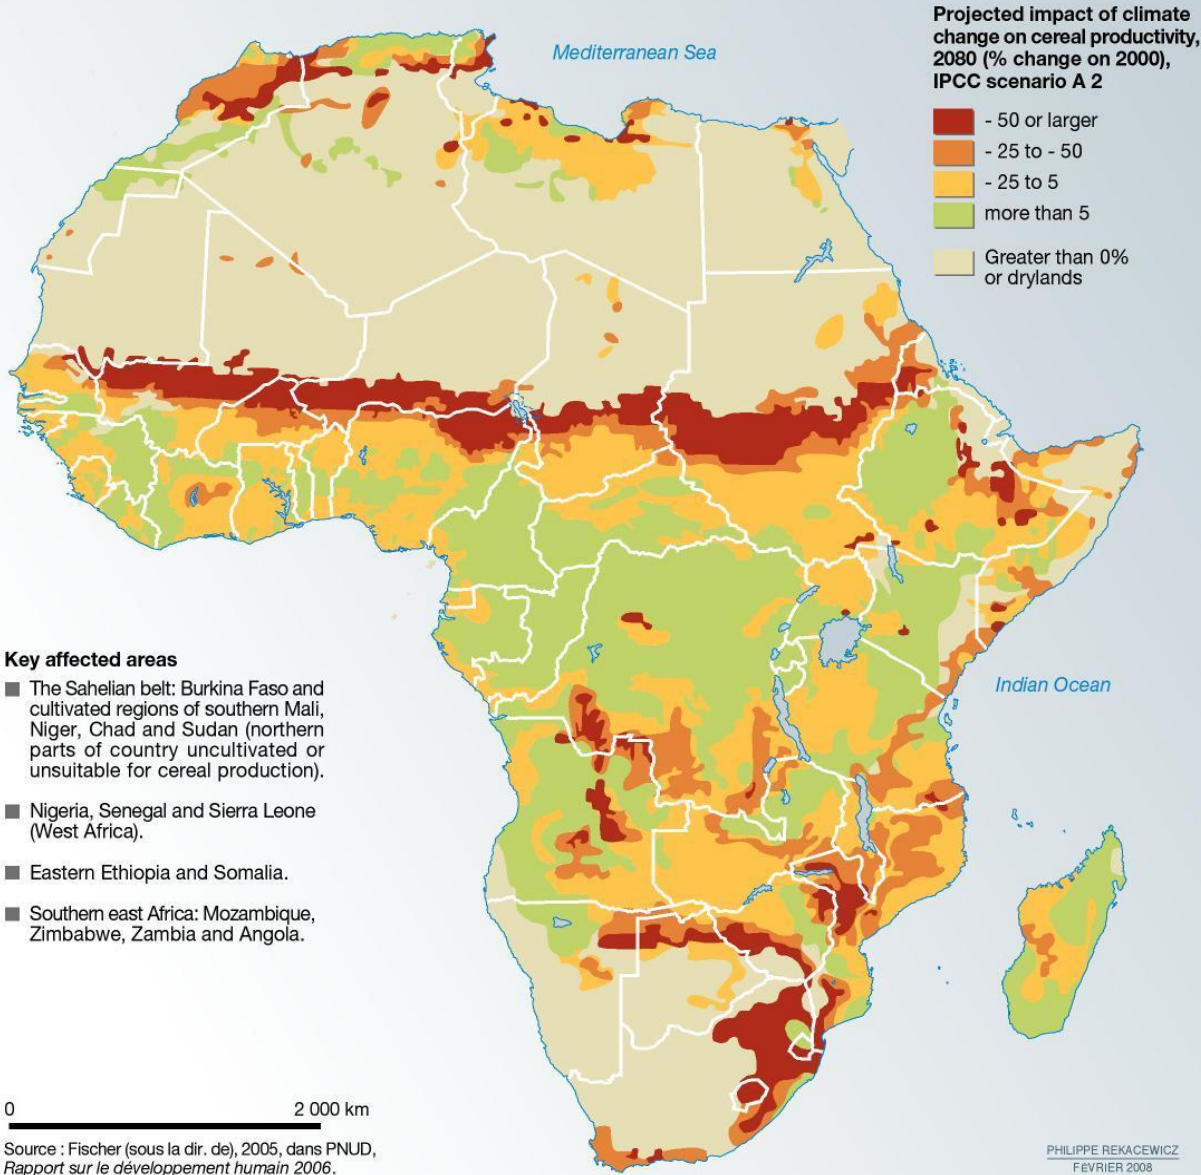

- Cycles of wet and dry/warm and cool
- Seasonal shifts
- Dry spells
- Global forcings - El Niño /La Niña
- Extremes - Droughts and floods
- Pests/ Diseases
- Market/price fluctuations
- Vulnerability depends on resilience, resilience depends on infrastructure and capacity

# Climate Change Considerations

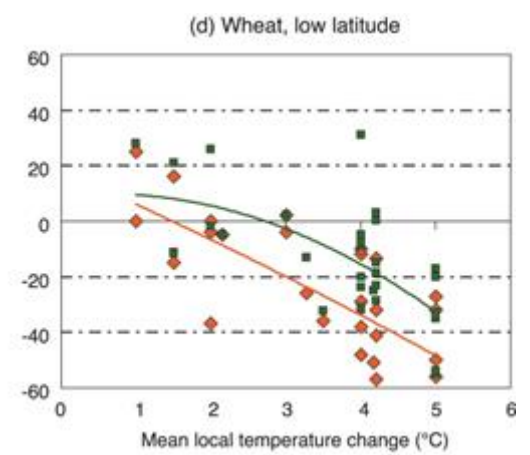

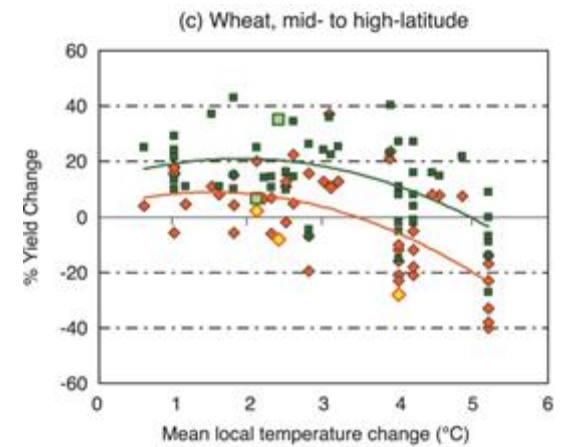

- Climate variability has a direct influence on food production...drought/flood/heat waves
- Increased temperatures are virtually certain
- Changes in rainfall patterns/seasonal shifts, intensity, and increasing variability
- Vulnerability depends on resilience, resilience depends on infrastructure and capacity
- Climate change increases uncertainty and exposure to risk

# Cereal productivity in Sub-Saharan Africa under a scenario of the IPCC that shows CO<sub>2</sub> atmospheric concentrations a level at 520-640 ppm by 2050

# Cereal Production

# Climate Information can help, but...data is scarce...

- Weather forecasts
- Seasonal rainfall and temperature forecasts
- Drought warnings
- Crop forecasts
- Long term forecasts
- Onset/cessation?
- Historical data

# Climate data/information....

What is the story?

# The Power of Stories

Once upon a time, there was a little girl named Goldilocks. She went for a walk in the forest. Pretty soon, she came upon a house. She knocked and, when no one answered, she walked right in. At the table in the kitchen, there were three bowls of porridge. Goldilocks was hungry. She tasted the porridge from the first bowl.

“This porridge is too hot!” she exclaimed...

Now that's a great story

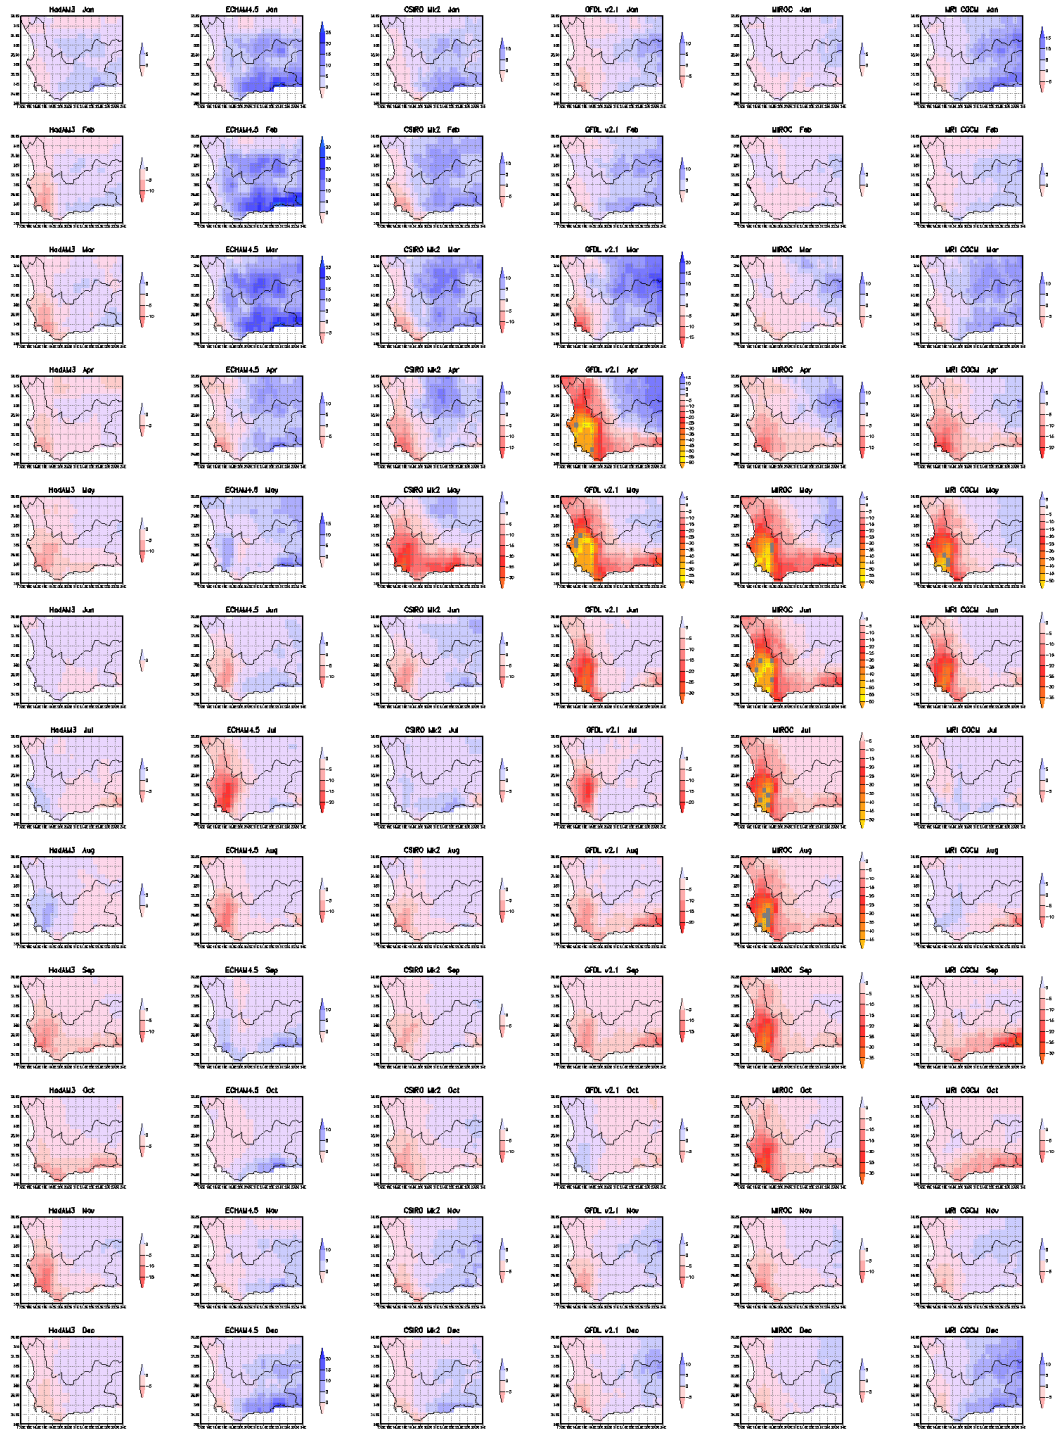

But how do most climate scientists tell it....?

# Like this...

Name	Species	Hair/Fur	Age	Appetite Level	Size	Preliminary Porridge Assessment	Preliminary Mattress Assessment
Goldilocks	Human	Blonde	8	Moderate	Petite	N/A	N/A
Papa	Bear	Brown	12	High	Big	Too Hot	Too Hard
Mama	Bear	Tawny	11	Moderate	Medium	Too Cold	Too Soft
Baby	Bear	Red-Brown	3	Low	Small	Just Right	Just Right

# IRI Multi-Model Probability Forecast for Precipitation for November-December-January 2016, Issued September 2015

Probability (%) of Most Likely Category

Generalized ROC (GROC): Lead 1.5 months, Precipitation Forecast Skill: NDJ

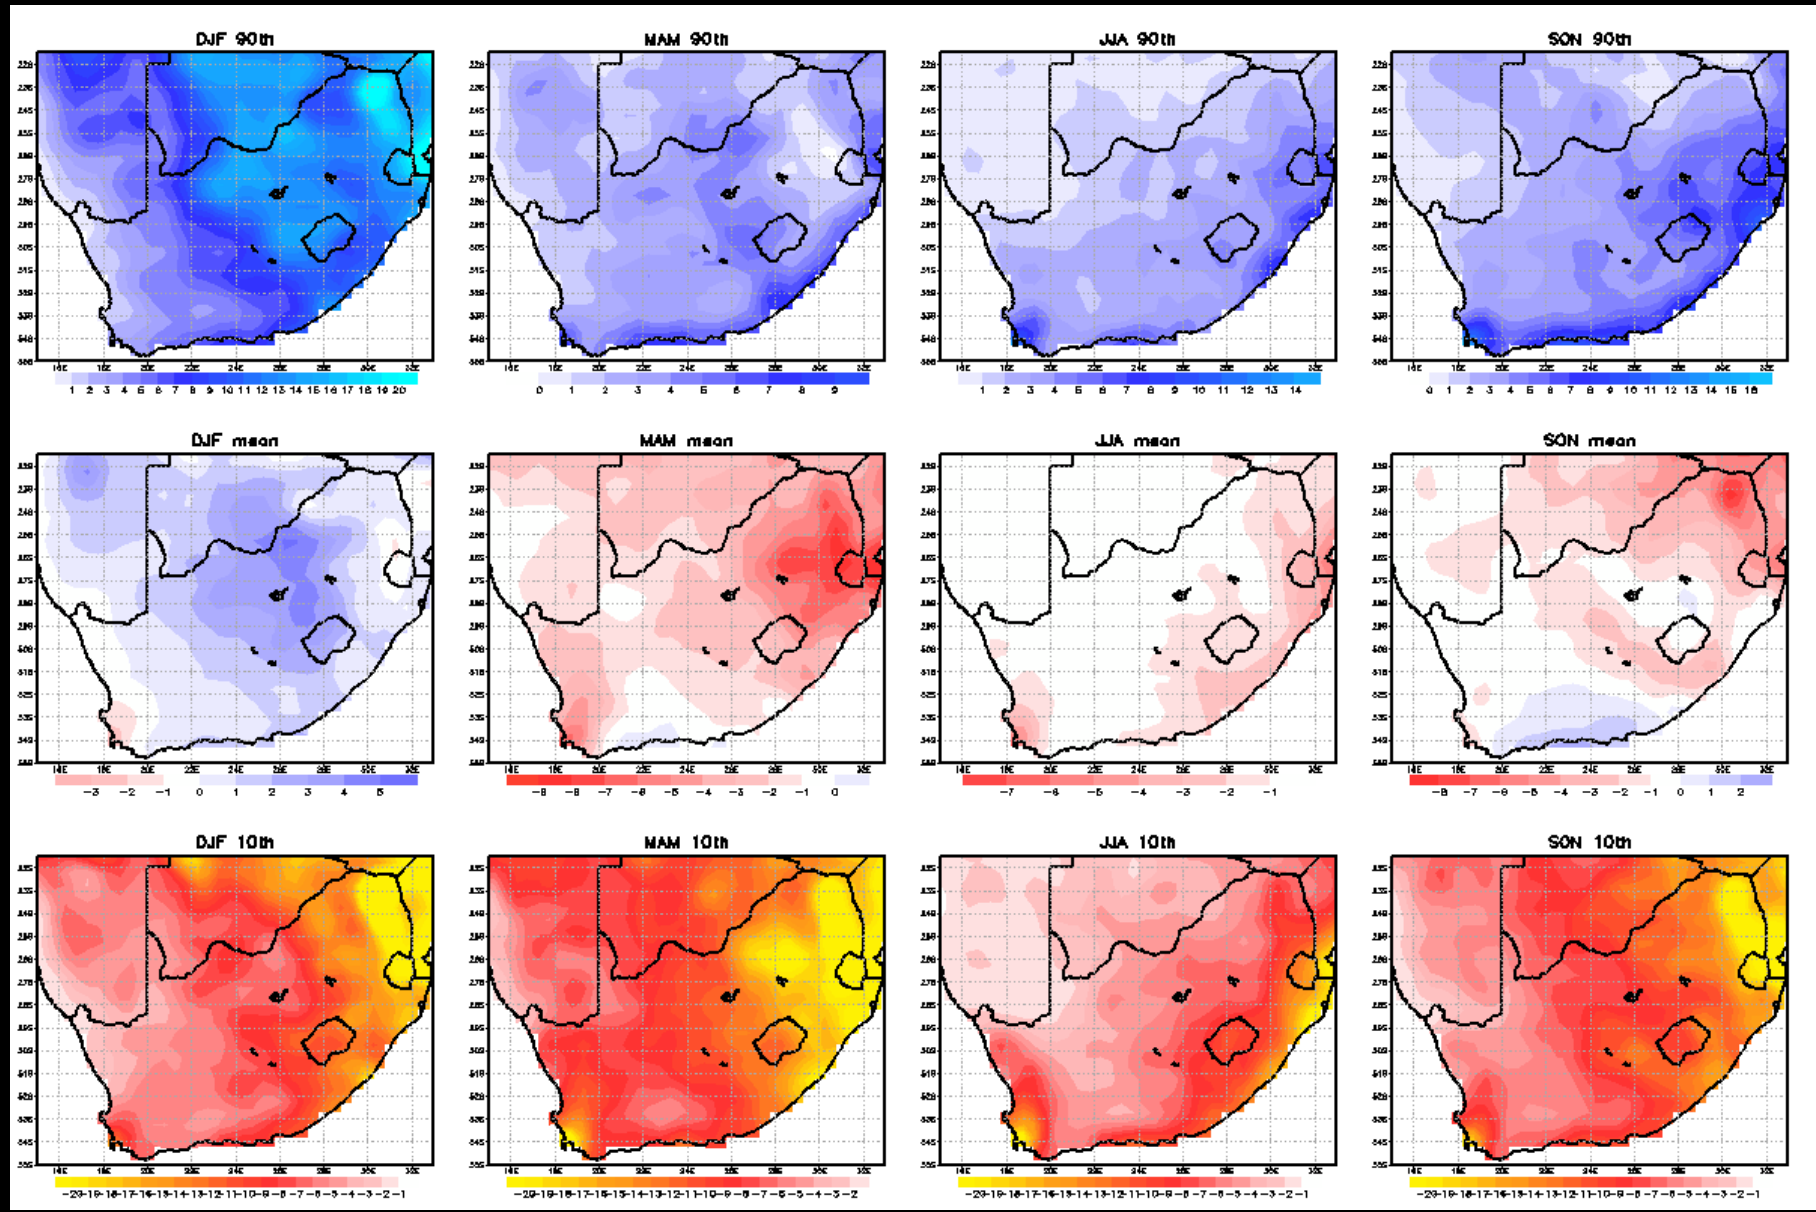

# The useful message

- Production of skilful forecasts
- Wide dissemination of the products
- Training in interpretation and application

# Rainfall anomalies 2040-2060 (mm per month)

Dataset is 'African merged stations CMIP5' Display explore content

# In context...rainfall

# Temperature increases

Average maximum temperature RCP 8.5

[Download this data as a CSV file](#)

Anomalies for period 2040 to 2060

S A ASTRONOMICAL OBSERVAT ( altitude 15m )

Average maximum temperature RCP 8.5

# Hot days

Hot days (tmax > 32°) RCP 8.5

Download this data as a CSV file

Anomalies for period 2040 to 2060

LILONGWE INT'L AIRPORT ( altitude 1229m )

Hot days (tmax > 32°) RCP 8.5

Highcharts.com

# The message (CC will affect CV!)

- It's (probably) going to get drier
- Increasing temperatures increases evaporation
- More intense rainfall, longer dry spells
- More flooding
- More frequent droughts
- Relevance for Food Security:
  - Favourable conditions for Disease and Pests?
  - More extreme episodes
  - Water insecurity
  - Food insecurity (crop yield impacts)
  - Spoilage?
  - ??????

# The alarm bells

- There is a dearth of useful climate information
- Are there crop thresholds for temp/rainfall that will be breached more often?
- How will the food/population/climate nexus respond to a changing climate in terms of exposure to more serious food security problems?
